

Ntuples for New Production

Yujun Wu

Ntuple Production Status

- Hlt ntuples have been processed using ORCA610 ntuple maker: Version 2.07 ;
- About 242,000 events have been processed (roughly 43.6% of the total DIGI data);
- 2,000 events of each data set were processed first (if possible);
- Ready ntuples are kept both at CERN and Fermilab;
- The ntuple info can be found on the JetMet web page.

Future

- Ntuple production continues as DIGI data are ready;
- Hope to finish everything within next two weeks;
- Currently, some data sets are not readable---Ian Fisk, Shafqat and I are actively working on it;
- Also, Greg has promised to integrate the ntuple maker into the whole production chain.
